

Ballistic Blocks

Product Overview

- Quick and easy to install
- Absorbs projectiles and fragments
- Protects from ricochet hazards
- Eliminates bullet fragmentation
- Modular, interlocking, free-standing design
- No adhesives/additional materials
- Suitable for indoor and outdoor applications
- Hard wearing under intense use
- Certified to BS EN1522/23 FB6
- Weight: 34kg (Standard/Corner)
47kg (Large)

Rosehill Security's FB6 certified engineered rubber ballistic blocks have been specifically designed for use in live-fire operational environments, including target hardening and asset protection.

Available in two sizes, the interlocking blocks can be used to construct a wide variety of temporary or permanent structures, and can be removed and used over and over again.

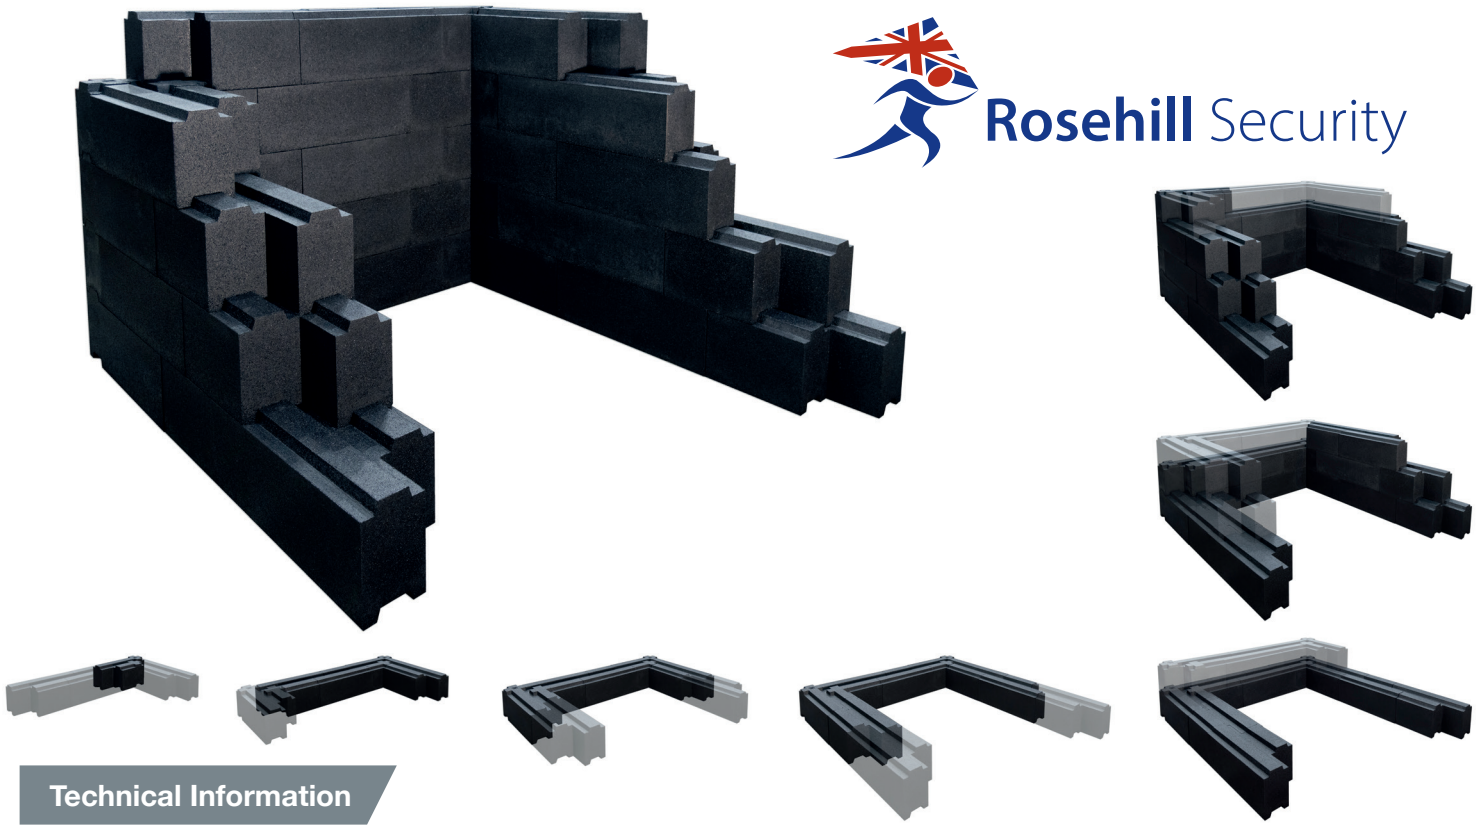

Made from 100% recycled tough and flexible rubber, combined with polyurethane for strength and durability, the ballistic blocks absorb projectiles and fragments, eliminating ricochet, rebound and bullet fragmentation.

Specially developed for ballistic use, the blocks have been used globally by militaries and police forces to create a range of structures including guard huts, sangars, and to reinforce defensive positions.
